FINWISE CO. · OCT 2023 – OCT 2024 · N = 13 MONTHS

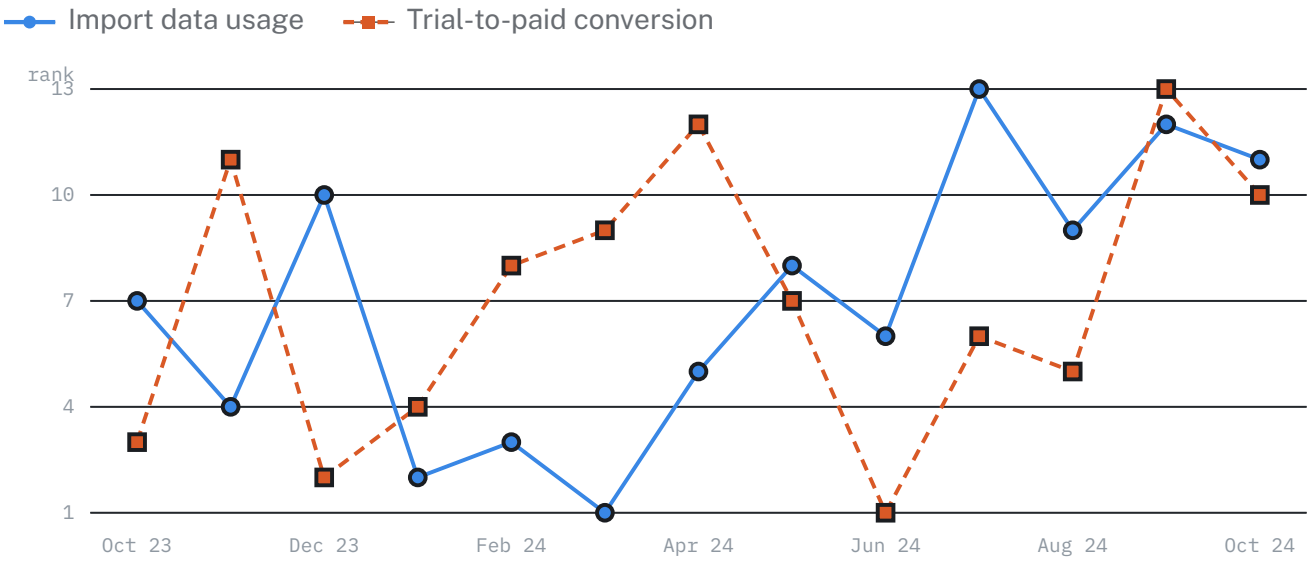
Import usage vs. trial-to-paid conversion

Spearman's coefficient compares the two metrics by rank, not raw value. The main chart plots each month's rank for both metrics on one shared axis, so the two lines sit on the same scale without a second y-axis.

SPEARMAN P	P-VALUE	PEARSON R (CHECK)
0.00	1.00	−0.05
No monotonic relationship	Two-tailed, n = 13	Linear view agrees

Monthly rank of each metric

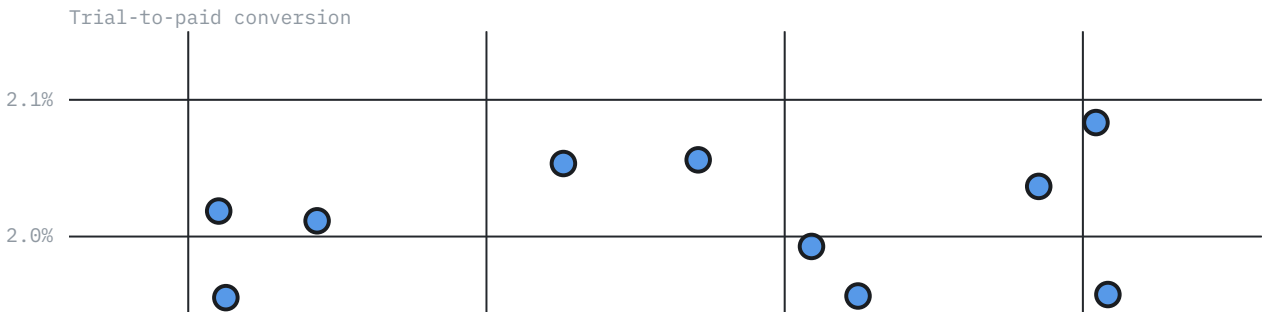
Rank 13 = that metric's highest month, rank 1 = its lowest. If the metrics moved together, the lines would track each other.

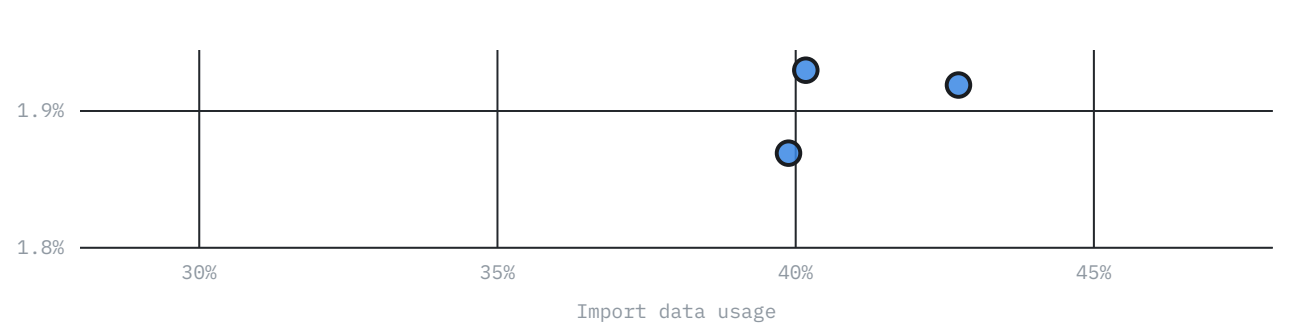


Hover or tap a month to compare ranks and values.

Raw values: import usage against conversion

Each dot is one month. Higher import usage does not line up with higher conversion: the dots form no upward or downward pattern.





Hover or tap a dot for its month.

Values and ranks

Month	Import usage	Import rank	Trial→paid	Conversion rank	Rank gap
Oct 23	40.17%	7	1.93%	3	+4
Nov 23	36.29%	4	2.05%	11	-7
Dec 23	42.73%	10	1.92%	2	+8
Jan 24	30.63%	2	1.96%	4	-2
Feb 24	32.16%	3	2.01%	8	-5
Mar 24	30.51%	1	2.02%	9	-8
Apr 24	38.55%	5	2.06%	12	-7
May 24	40.45%	8	1.99%	7	+1
Jun 24	39.88%	6	1.87%	1	+5
Jul 24	45.42%	13	1.96%	6	+7
Aug 24	41.23%	9	1.96%	5	+4
Sep 24	45.22%	12	2.08%	13	-1
Oct 24	44.26%	11	2.04%	10	+1

Conversion varies only between 1.87% and 2.08% because Paid is 2% of trials, rounded, in every month. A coefficient of zero is what that formula would produce, so this result says nothing about whether importing data drives real conversion. That needs user-level data.
