FINWISE CO. · OCT 2023 – OCT 2024 · N = 13 MONTHS

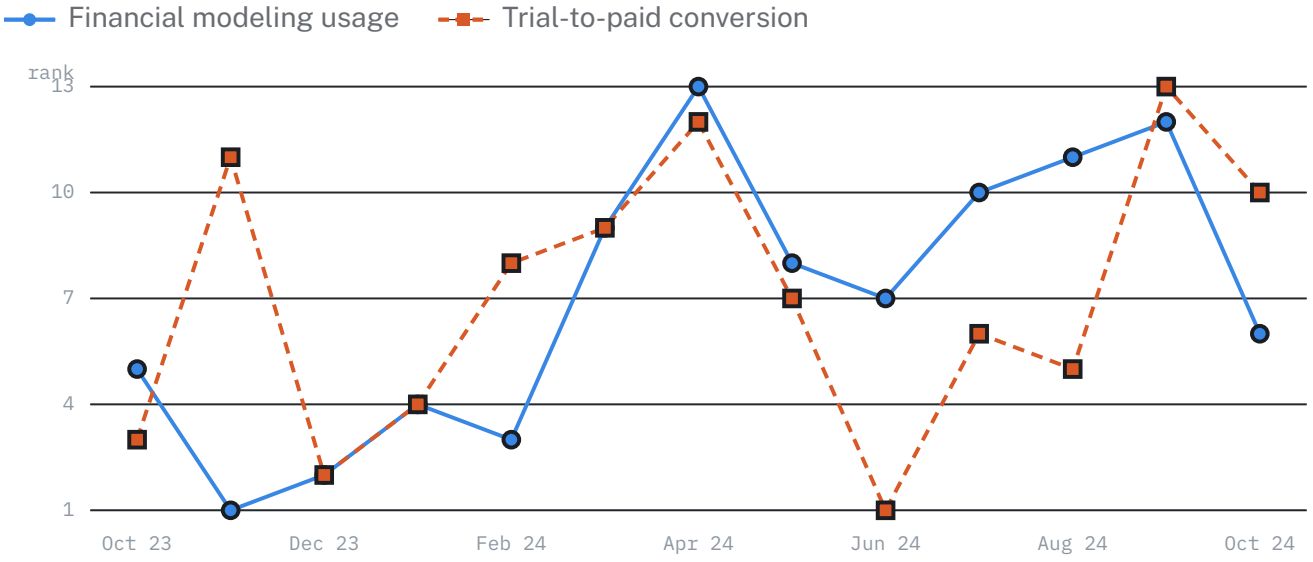
Financial modeling usage vs. trial-to-paid conversion

Spearman's coefficient compares the two metrics by rank, not raw value. The main chart plots each month's rank for both metrics on one shared axis, so the two lines sit on the same scale without a second y-axis.

SPEARMAN P	P-VALUE	PEARSON R (CHECK)
0.35	0.24	0.24
Weak positive relationship	Not significant, two-tailed, n = 13	Linear view is weaker still

Monthly rank of each metric

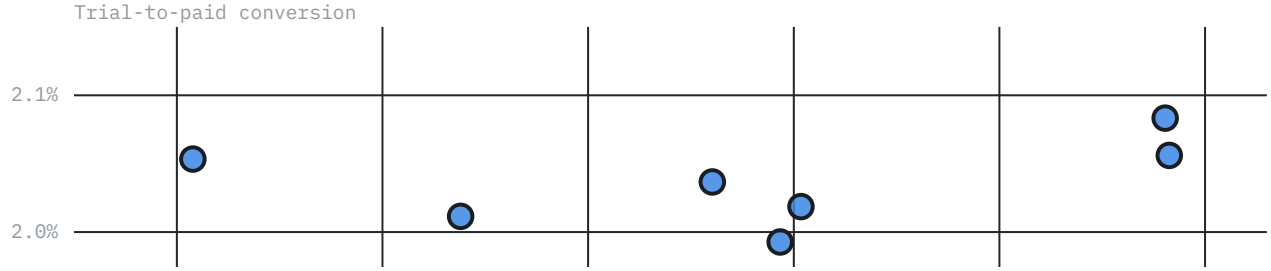
Rank 13 = that metric's highest month, rank 1 = its lowest. If the metrics moved together, the lines would track each other.

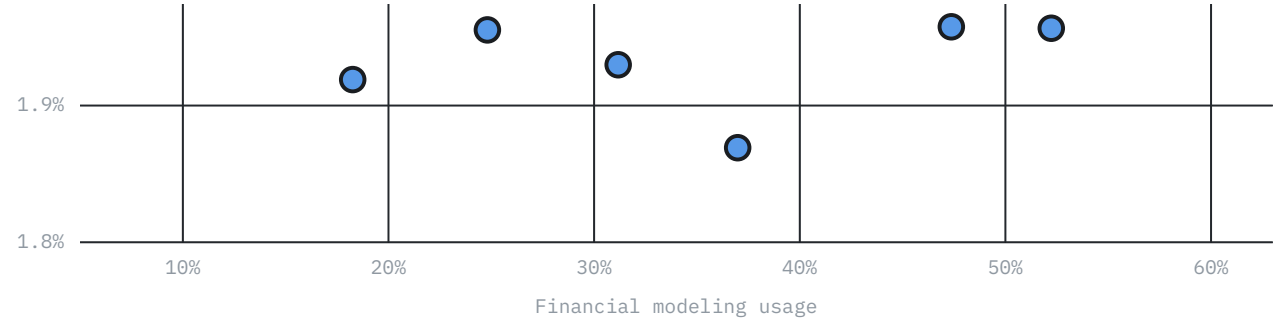


Hover or tap a month to compare ranks and values.

Raw values: modeling usage against conversion

Each dot is one month. Months with more modeling lean slightly toward higher conversion, but the spread is wide and the slope is shallow.





Hover or tap a dot for its month.

Values and ranks

Month	Modeling usage	Modeling rank	Trial→paid	Conversion rank	Rank gap
Oct 23	31.17%	5	1.93%	3	+2
Nov 23	10.78%	1	2.05%	11	-10
Dec 23	18.26%	2	1.92%	2	0
Jan 24	24.81%	4	1.96%	4	0
Feb 24	23.80%	3	2.01%	8	-5
Mar 24	40.35%	9	2.02%	9	0
Apr 24	58.26%	13	2.06%	12	+1
May 24	39.34%	8	1.99%	7	+1
Jun 24	36.98%	7	1.87%	1	+6
Jul 24	47.37%	10	1.96%	6	+4
Aug 24	52.23%	11	1.96%	5	+6
Sep 24	58.06%	12	2.08%	13	-1
Oct 24	36.04%	6	2.04%	10	-4

Conversion varies only between 1.87% and 2.08% because Paid is 2% of trials, rounded, in every month. Any correlation here comes from rounding noise in that formula, so this result says nothing about whether modeling drives real conversion. That needs user-level data.
